

Dear students,

Welcome to the first week of the **Python Compact Programming Course**.

Your learning goals for this week are as follows:

1. Install the development environment.
2. Set up a GitHub repository.
3. Write your first simple Python program.

To develop your **Python** programs, we recommend using either Visual Studio Code or PyCharm, which will make future collaborative work on your capstone project easier.

1. Install the latest version of Python <https://www.python.org/downloads/release/python-3147/>
2. Install or **Visual Studio Code** <https://code.visualstudio.com/> with the Python extension development pack
<https://marketplace.visualstudio.com/items?itemName=franneck94.vscode-python-dev-extension-pack> or **PyCharm**
https://www.jetbrains.com/pycharm/?source=google&medium=cpc&campaign=emea_en_de_pycharm_branded&term=pycharm&content=785237935148&gad_source=1&gad_campaignid=14127625811&gclid=Cj0KCQjwk5nVBhDiARIsAHNGqaeu7UnLBAY5Tiv_oG0cQnIXG7Z8zkG0N4AUSZGMV1P--0r96961qkYgaAiznEALw_wcB
3. Complete tasks from the tasks_week1.pdf
4. Setup the **Git** repository:
PyCharm <https://www.jetbrains.com/help/pycharm/set-up-a-git-repository.html>
Tutorial <https://www.jetbrains.com/help/pycharm/working-with-git-tutorial.html>
VS Code: <https://code.visualstudio.com/docs/sourcecontrol/repos-remotes>
5. Create an open **GitHub** repository
PyCharm help: <https://www.jetbrains.com/help/pycharm/github.html> and commit your solutions there
VS Code: <https://code.visualstudio.com/docs/sourcecontrol/github>

I wish you an effective week.
